PROFESSIONAL SUMMARY

Highly motivated Computer Science Engineering student with strong knowledge of Java,HTML, CSS,JavaScript, and the MERN stack. Skilled in problem-solving, web development, and SEO, with hands-on experience through academic projects. Seeking an opportunity to apply my technical skills in a dynamic organization while contributing to business growth and continuously developing my professional expertise.

TECHNICAL SKILLS

Front-End Tech: HTML,CSS,JavaScript,React.js

Front-End Framework: Bootstrap

Backend: Node.js,Java

Database: MangoDB

Web Performance Optimization: SEO Executive,Technical SEO Specialist,On-Page and Off-Page SEO

PROJECTS

EvChrageMap

Dec 2025 – Present
HTML5,CSS3,JavaScript (ES6+)

- An EV Charge Map is a system that helps electric vehicle users locate, navigate, and manage charging stations using real-time map-based data and smart features. EV Charge Map provides real-time location of charging stations, live availability status, navigation support, booking, payment, and user management features.

Hotel Reservation System

May 2026 – Present
Mern Stack

- Developed a Hotel Reservation and Food Ordering System that allows users to book hotel rooms, browse food menus, place food orders, and manage reservations online. Implemented user authentication, room availability management, order processing, and database integration to ensure a seamless user experience.

CampusEra-All-In-One-Android App

June-2026
Android Studio,Jetpack,LocalStorage (Kotlin)

- Developed a comprehensive Android application designed to improve student productivity and simplify daily academic tasks. The application integrates multiple utility and productivity tools into a single platform, enabling students to manage notes, documents, assignments, calculations, and study resources efficiently.
- Developed a feature-rich Android application using Kotlin and Android Studio that combines note management, PDF tools, QR sharing, calculators, document vault, and productivity utilities into a single platform. Optimized for offline usage, smooth performance, and modern Material 3 UI design.

Weather Forecast

Aug-2024
Python, Flask,OpenWeatherMap API,MongoDB

- A Weather Forecast application uses APIs to fetch real-time weather data and displays it using frontend technologies with location services.
- The Weather Forecast application provides real-time weather data, location-based search, hourly and weekly forecasts, and atmospheric details using weather APIs. The application first identifies the user's location using the Geolocation API. If location access is denied, users can manually search for weather details by entering a city, state, or country name. This ensures flexibility and usability for all users.

EDUCATION

Vivekananda Global University,Jaipur

B.Tech In Computer Science

July 2022 -July 2026

RLSY college Bettiah

Intermediate of Science

2020-2022

CERTIFICATIONS

- Mern Stack Developer Training (AU Skills Academy,Jaipur)
- Code Red Hackathon (In Campus-Jaipur)
- NPTEL-2
